```
In [8]:  # Write a Python program to find those numbers which are divisible by 7 and multiples of 5, for user inpu

         num=int(input("enter the number"))
         a=num%7
         b=num%5
         if a==0 and b==0:
             print("Given number is divisible by 7 and multiple of 5:")
         else:
                 print("Given number is not divisible by 7 and multiple of 6:")
```

```
enter the number70
Given number is divisible by 7 and multiple of 5:
```

```
In [15]:  # write a python pgm to check the user input is even or odd or Zero

          num=int(input("Enter the number"))
          n=num
          if num==0:
              print("number is zero")
          else:
              if n%2==0:
                  print("number is even")
              else:

                  print("number is odd")
```

```
Enter the number10
number is even
```
